# Jan Egil Ring

Hybrid cloud with Azure Arc

# AGENDA

- Introduction
- Arc-enabled Servers
  - SSH access
  - Private Link
- Azure Arc Jumpstart
  - ArcBox
  - HCIBox
    - Arc-enabled Kubernetes
    - SQL Managed Instance
  - Agora
- Summary

# Azure

## The world's computer

# Azure

The world's computer

- 1 Services for all workloads
- 2 Intelligent data and AI
- 3 DevOps tools and experiences
- 4 Security, identity, and governance
- 5 Continuous cloud-to-edge computing fabric

# Azure

 Azure

 aws

On - premises

# Azure Arc-enabled servers

GENERALLY AVAILABLE

Bring Azure capabilities to your on-premises and multicloud servers with Azure Arc

## Reach

Windows and Linux

VM and bare metal

At scale searchable inventory

## Configure

Consistent VM extensions

Centralized agent  
management—Monitoring,  
Security, Update Management

## Govern

Built-in Azure policies

Compliance across environments

Audit and enforce OS settings

## Secure

Microsoft Entra ID  
Managed Identity

Server security baselines

Role-Based Access control

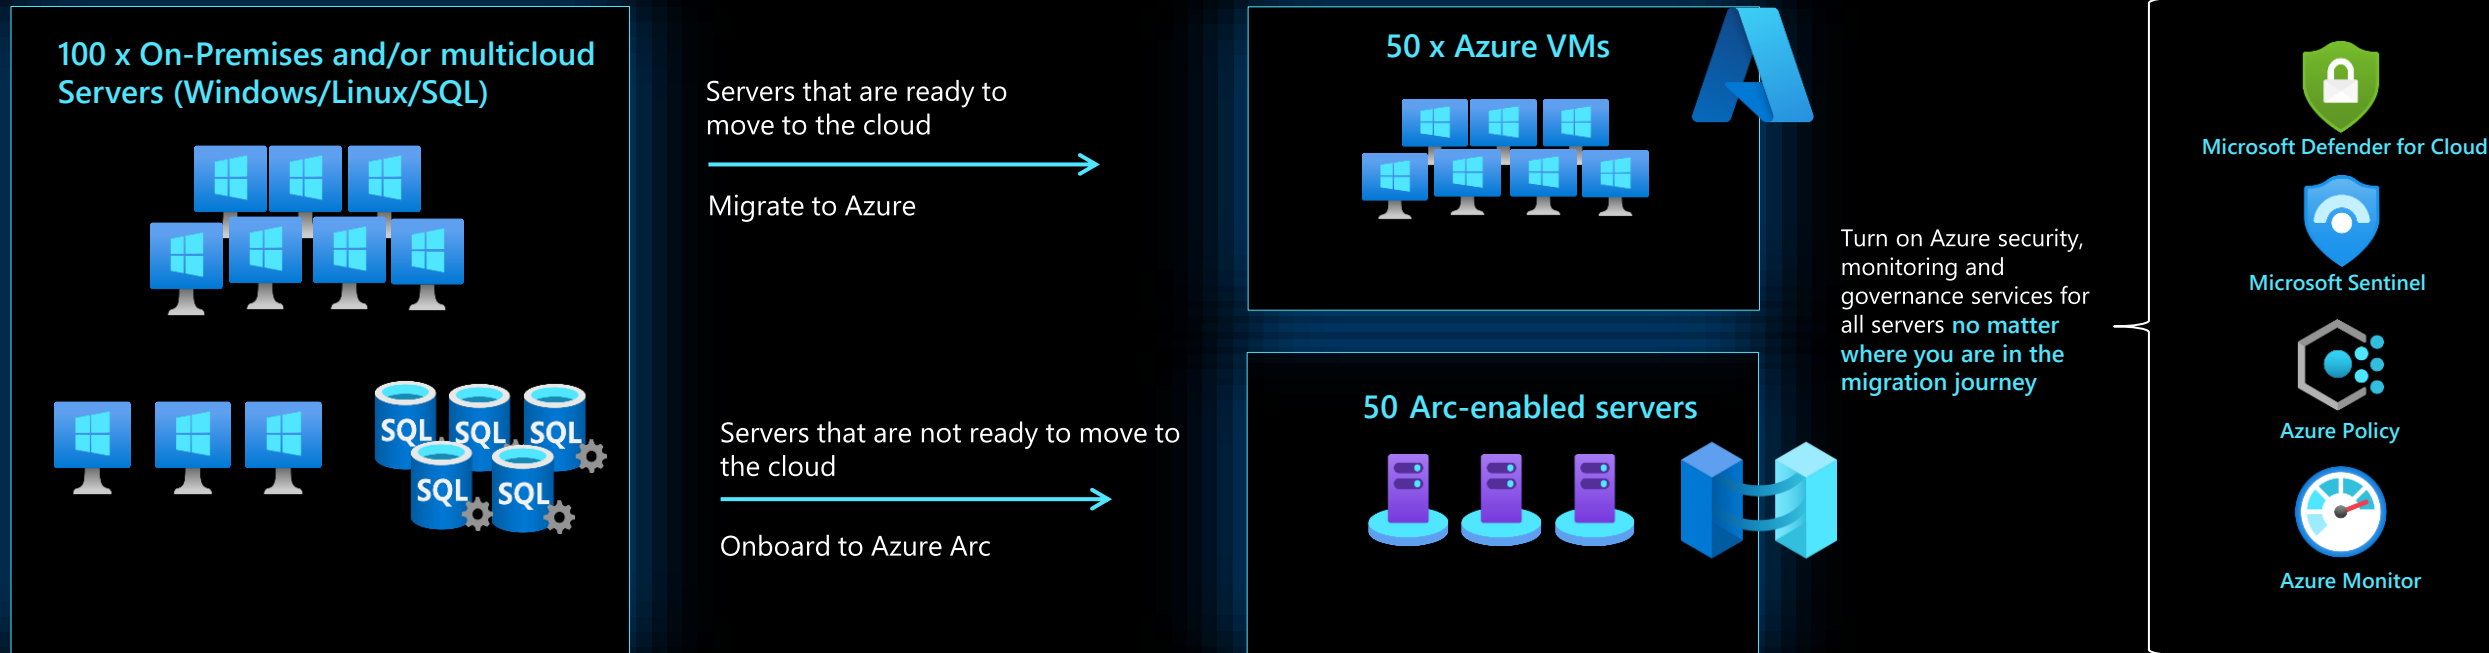

Any infrastructure, familiar tools

# Migrate and Modernize to Azure on your own terms

Azure Arc helps you consistently secure and govern infrastructure across hybrid environments as you migrate and modernize.

# Migrate and Modernize to Azure on your own terms

Azure Arc helps you modernize your existing apps as well as build new cloud native apps anywhere

OR

Modernize in place with Azure  
Arc

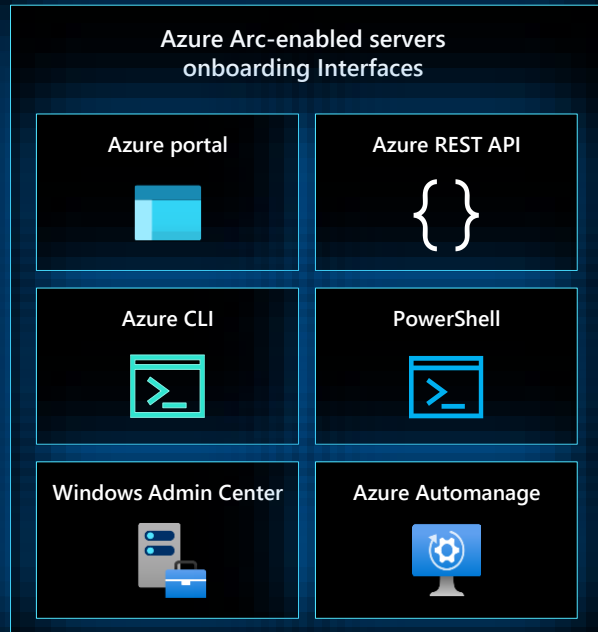

A blue arrow points from the 'New cloud native apps and databases' box to the 'Managed Kubernetes anywhere' box.

# Azure Arc Jumpstart – Core Design Principals

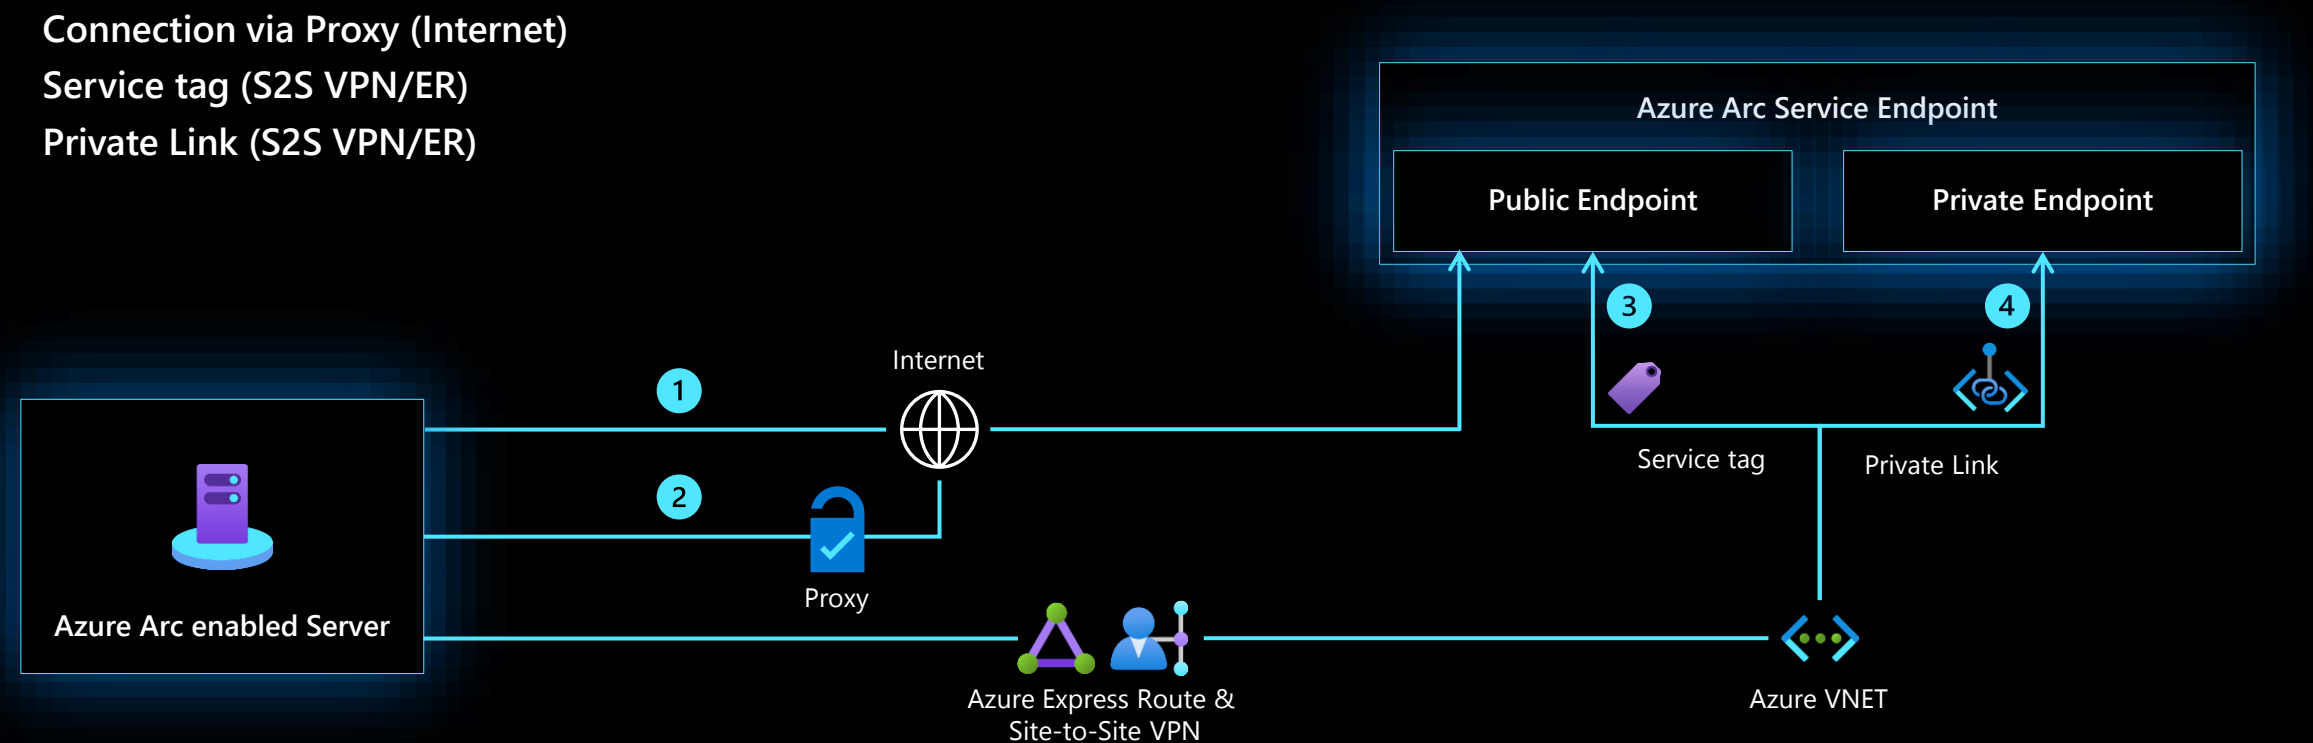

- “User never fail” mentality
- Minimum dependency between bootstrap and unified operations scenarios
- If it can be automated, it will be automated
- 1-click automation
- Modular automation, lego coding, reusable, comprehensive, repeatable, reliable
- Support as many deployment options as possible
- No detail is too small, no screenshot, note, disclaimer or explanation left behind
- Only public preview and GA services/features

# Azure Arc-enabled servers

## Connectivity Options

1. Direct connection (Internet)
2. Connection via Proxy (Internet)
3. Service tag (S2S VPN/ER)
4. Private Link (S2S VPN/ER)

Demo

# Jumpstart ArcBox Flavors

ArcBox comes in multiple “flavors”, or configurations, which can be selected to best suit your needs. Currently, the available flavors are:

- [ArcBox “Full”](#) As the name implies, this flavor includes all ArcBox features including Azure Arc-enabled servers, Azure Arc-enabled Kubernetes, and Azure Arc-enabled data services. Use this flavor if you want to experience everything ArcBox has to offer.
- [ArcBox for IT Pros](#) ArcBox for IT Pros focuses specifically on Azure Arc-enabled servers and Azure Arc-enabled SQL Server functionality.
- [ArcBox for DevOps](#) ArcBox for DevOps focuses specifically on Azure Arc-enabled Kubernetes and the experience for DevOps engineers.
- [ArcBox for DataOps](#) ArcBox for DataOps focuses specifically on Azure Arc-enabled SQL Managed Instance.

# Azure Arc-enabled servers

## SSH access - Architecture

# SSH into your Azure Arc-enabled servers

## How to SSH into your Arc-enabled servers:

- ✓ Install Azure CLI SSH extension or/and Azure PowerShell SSH module on the client machine
- ✓ Enable SSH service on Arc-enabled servers
- ✓ Connect to Arc-enabled servers using SSH or using Remote Desktop tunneled via SSH
- ✓ Connect using Azure AD/Entra ID based SSH login

```
Welcome to Ubuntu 20.04.5 LTS (GNU/Linux 5.4.0-137-generic x86_64)
```

```
* Documentation:  https://help.ubuntu.com
* Management:    https://landscape.canonical.com
* Support:        https://ubuntu.com/advantage
```

```
System information as of Mon 23 Jan 2023 07:40:10 AM UTC
```

```
System load:  0.61      Processes:      143
Usage of /:    42.3% of 47.56GB   Users logged in:  0
Memory usage: 26%      IPv4 address for eth0: 10.10.1.104
Swap usage:   0%
```

```
* Strictly confined Kubernetes makes edge and IoT secure. Learn how MicroK8s
just raised the bar for easy, resilient and secure K8s cluster deployment.

# Managed Kubernetes from cloud to edge

GENERALLY AVAILABLE

Flexible deployment options on the infrastructure of your choice

# GitOps – Definition & Principles

Git as the source of  
truth for a system

Git as the single place  
where we operate  
(create, change, and delete)

All changes are  
observable

System state described  
declaratively

State declaration versioned  
in source control

Approved changes are  
applied automatically

Agents enforce  
desired state

Now available

# Introducing Jumpstart Agora

Jumpstart for Industries and application  
development velocity across cloud and edge

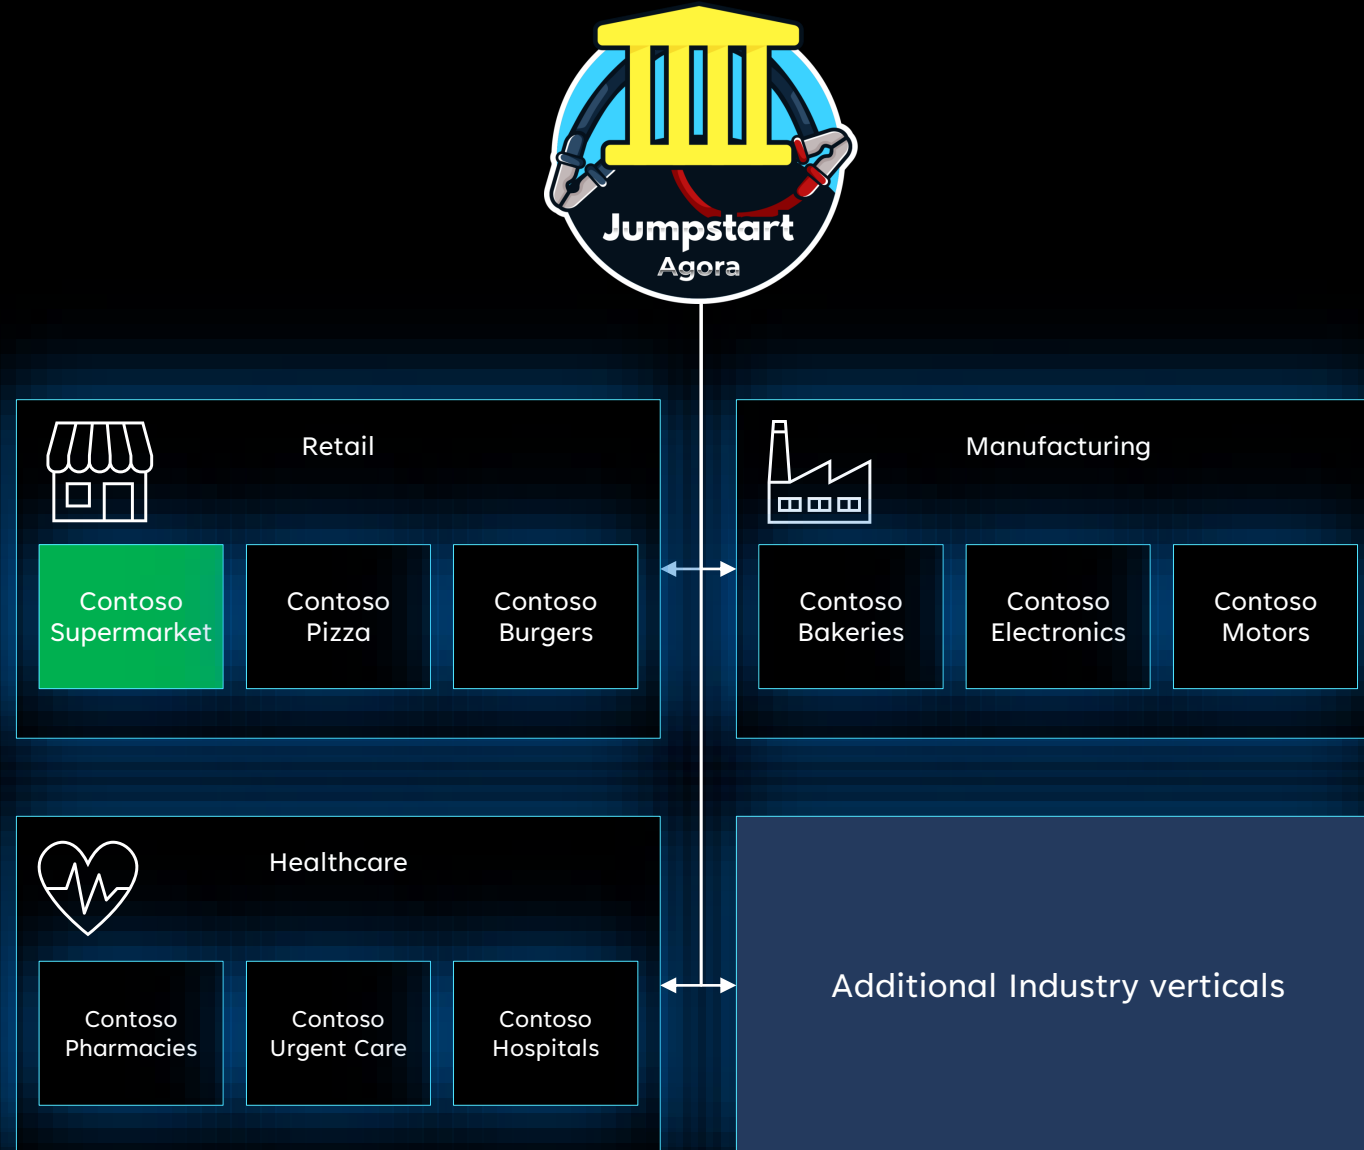

*The word "agora" comes from the ancient Greek term for a public gathering place or assembly, and it has come to be used more broadly to refer to any place or forum where people come together for discussion or exchange.*

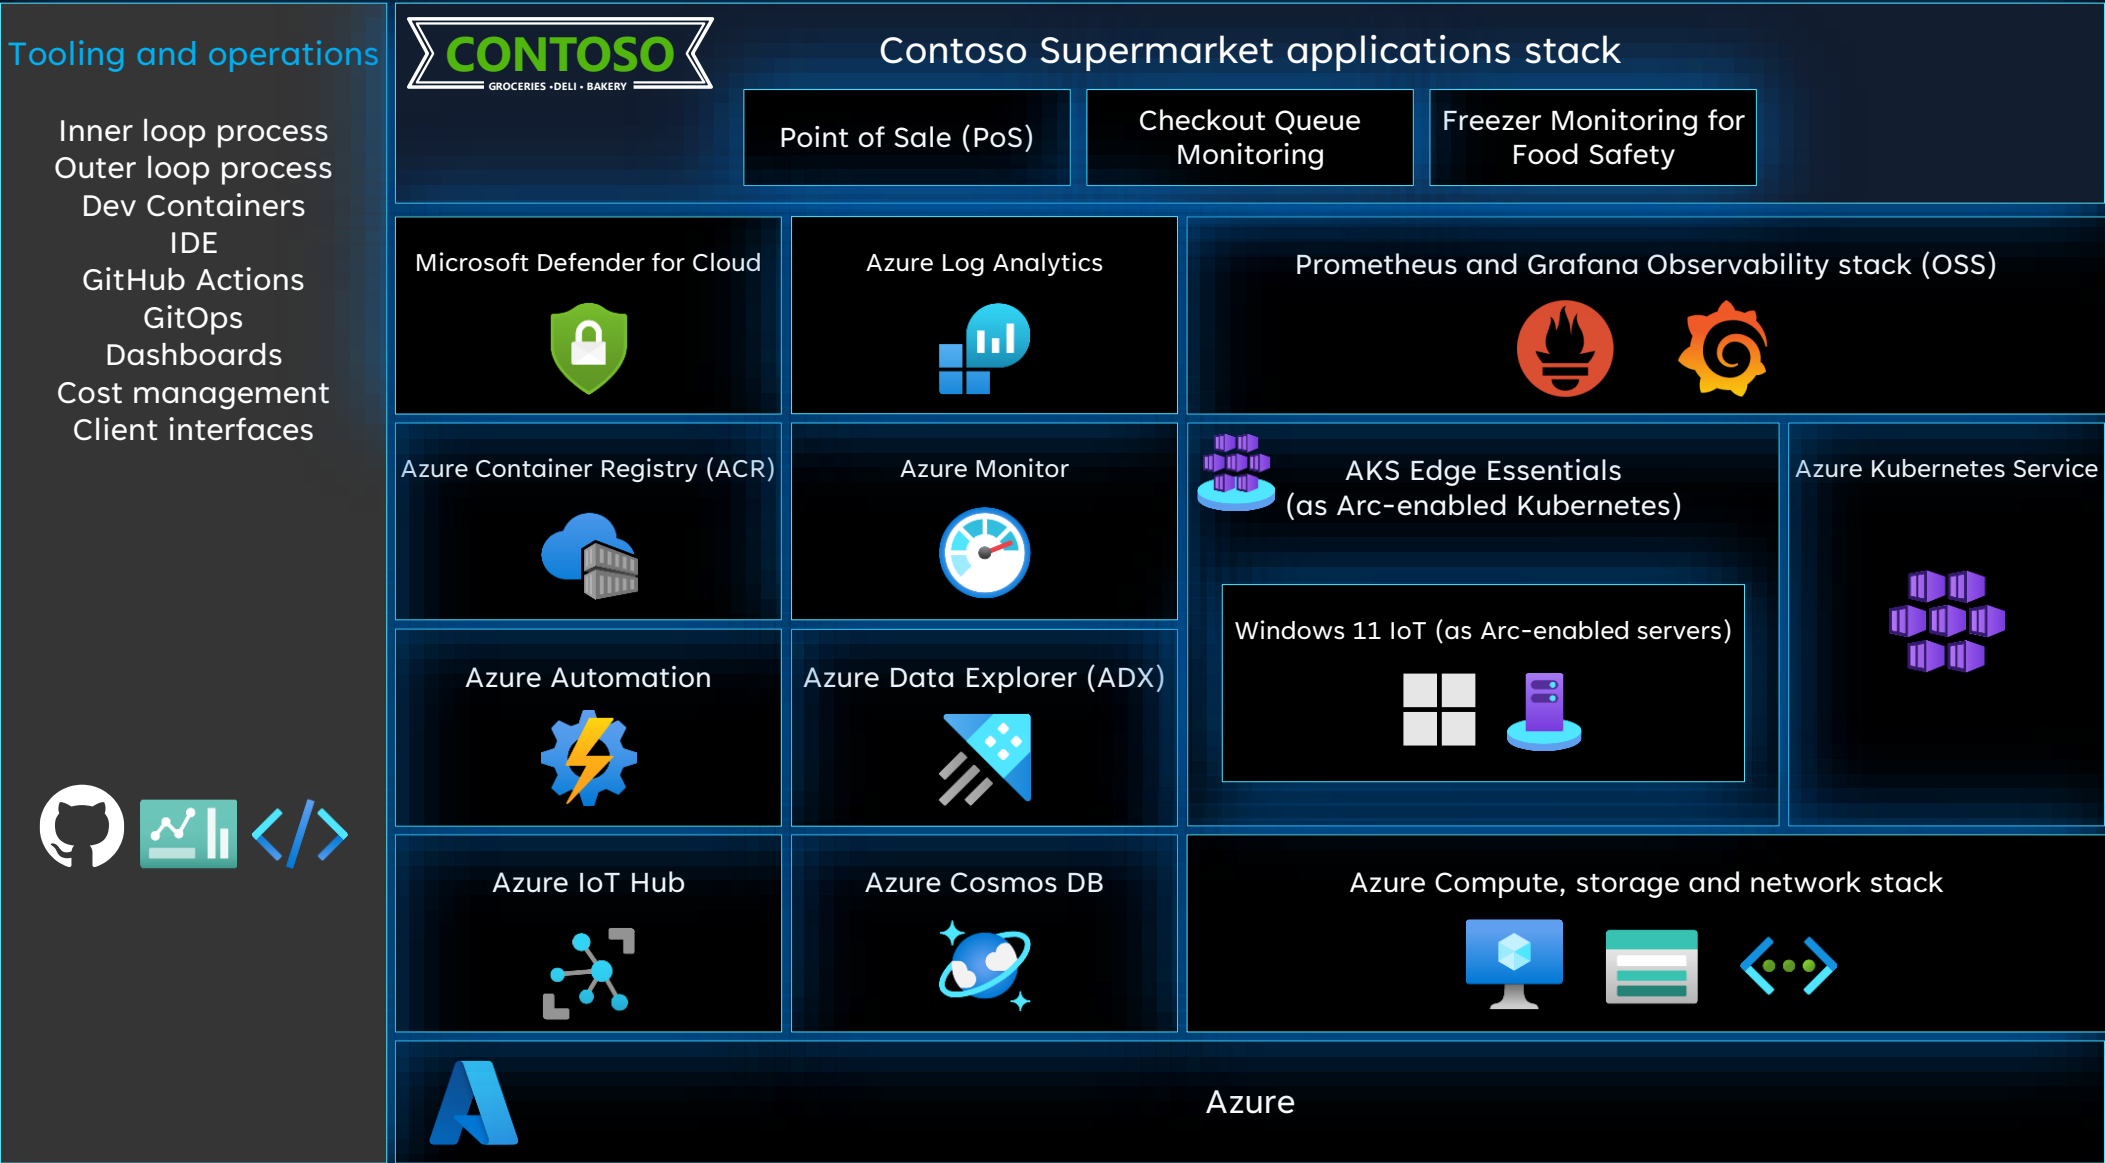

# Jumpstart Agora industries landscape (current and future)

# Contoso Supermarket

## Applications and technology stack
